Whispers from The Brighter World

Sunday, December 5, 1999 – 8:00 a.m.

The Heart's Code is a very good approach to the subject. This book is interesting; it represents a serious scientific study. It does not capture all the aspects, the most decisive ones, but it can give sceptics food for thought.

This researcher has understood that the heart is the seat of the soul; he explored at the level of reactions resulting from heart transplants.

The physical heart is the reflection of the spiritual heart, a kind of replica that does its work – such an important one.

The spiritual heart is vast, it bathes the physical heart, surrounds and assists it. The secret code of the soul lies there, as does the genetic code that makes up the personality of a being.

Both are involved. It's a vast programme for scientists, who aren't even close to decoding everything, yet it is a promising start. You are all beginning to have proof of what we have been putting forward for a long time, and that's a small step forward.

For our part, we work on important points that make you progress, as is explained in some of our books. The day when spirituality and science meet, a great step will be taken for the good of humankind.
