Whispers from The Brighter World

Thursday, December 23, 1999 – 8:00 a.m.

We will come back to the definition of the esoteric symbol of the heart. This heart is vast and its meanderings are innumerable. One can only give a schematic idea of what it really represents. The idea of the vacuum at the centre of the atom is good and correct. It is an extremely complex part; we have elaborated on the issue in our books without being able to satisfy your curiosity.

This symbol can give free rein to your imagination. Over time and as your comprehension evolves, with the work that is being effected on you all, you will understand it differently.

These are mysteries that do not reveal themselves straight away; the light must grow in you gradually. Starting from a simple idea, the foundations are laid; it's up to you all to build the edifice of knowledge, advancing step by step towards the supreme goal.

May this divine energy, contained in the heart of the atom, vibrate in you all to the highest degree.
