Whispers from The Brighter World

A Fourth Revelation

Sunday, October 29, 2000 - 8:00 a.m.

We have been drawing your attention to the ravages of pollution for a long time. Governments hide the seriousness of the situation.

"To have enough to eat is a problem for many individuals on Earth, but one day soon, it will become general, even for the very well-off.

"Pollution is in the soil, in the air that you breathe and around the Earth. These different kinds of pollutions add up and will bring about increasing difficulties, in particular with regard to food.

"Political leaders will not indefinitely be able to continue to bury their heads in the sand. Talking about these cases of sick cows is not enough. In the future, all animals will know difficulties of this nature.

"To a lesser extent, the plant kingdom is also not saved from this. It also presents similar inconveniences related to cultivation methods, which come on top of the various pollutions.

"If agriculture, livestock farming and all that relates to food, are not reviewed and corrected in a radical way, there will be serious problems.

"More and more, you should be very vigilant on your nutrition; your health hinges on that."
